

A Field Guide to the Chomsky Construction of a grammar from a PDA

Notation: $[pXq]$ will generate all strings w so that $(p,w,X) \Rightarrow^*(q,e,e)$
i.e., $[pXq]$ represents all strings that take the PDA from state p to state q while popping X off the stack.

Rule 1: $S \Rightarrow [QZ_0p]$ where Q is the start state, p is any state

Rule 2: Suppose the PDA has transition

Then for every sequence of k states $r_1 \dots r_k$

$$[qXr_k] \Rightarrow a[rY_1r_1][r_1Y_2r_2] \dots [r_{k-1}Y_kr_k]$$

Rule 3: If there is a transition

then $[qXr] \Rightarrow a$

Rule 4: Suppose there is a transition

then for any sequence of states $r_1 \dots r_k$

$$[qXr_k] \Rightarrow [rY_1r_1][r_1Y_2r_2] \dots [r_{k-1}Y_kr_k]$$

Rule 5: Suppose there is a transition

then there is a rule $[qXr] \Rightarrow e$
